TAMPA BAY WAVE · CYBERTECH|X 2027 · EXECUTIVE SUMMARY

Logical Coders

Structure You Can Prove.

Audit-ready compliance evidence for small healthcare and professional practices, built on NIST CSF 2.0, NIST SP 800-53 and the HIPAA Security Rule, for teams that have no security staff.

Problem

Small practices are asked for compliance proof they cannot produce. Clients, cyber insurers and auditors each want evidence that controls work. A 20-person dental or therapy office has no one whose job is compliance. Frameworks describe outcomes, and policy templates and screenshots do not show that a control actually operates.

Solution

Logical Coders ties every control to a risk, an owner and its evidence.

- **Today: GRC Toolkit.** Twelve templates in five phases map CSF 2.0 to SP 800-53 to HIPAA. They produce risk registers, control narratives, gap assessments and audit evidence packages.
- **Next: GRC Engine.** Software that automates evidence collection: client-approved, read-only API pulls from Entra ID, Okta, AWS, GitHub and Jira (no passwords collected); one test reused across HIPAA, SOC 2, ISO 27001 and PCI DSS; continuous monitoring; and a sampling calculator.

Version 1 uses no large language model, so every result is repeatable and an auditor can re-perform it.

Built So Far

The company is pre-revenue. The method is written, tested on case data and public: a GRC white paper and MS capstone (Purdue Global, 2026), 12 templates with worked exhibits, Compliance Analyst and IT Auditor guides, and 8 sample artifacts. Re-performing AC-2 (Account Management) in Python and SQL found 7 exceptions in the fictional Sunshine Dental Group case.

Per audit engagement	Manual baseline	Pilot target
Evidence requests	100	65
Auditor collection time	20 hours	7 hours
Client response cycles	5	2
Exceptions caught early	2	8

Hypothetical pilot targets, not achieved results.

Market, Competition and Model

First customers: Tampa Bay dental, therapy and small clinic practices and their business associates; small audit and CPA firms are the second buyer. Vanta, Drata and Secureframe are built for tech companies seeking SOC 2, consultants bill by the hour, and template packs offer no evidence. Revenue runs from a gap assessment to a monthly retainer to a GRC Engine subscription for audit firms. Prices are hypotheses to set in the pilot.

AT A GLANCE

Founder	**Anèl Henning**
Location	**Tampa, Florida**
Stage	**Pre-revenue**
Focus	**HIPAA · CSF 2.0 · 800-53**

WHY NOW

729 healthcare breaches reported to HHS in 2024

185.8M people affected in 2024, a record

99.1% of Florida's 54,204 health care employers are small businesses

Sources: HIPAA Journal (OCR data); SBA Office of Advocacy, Florida 2025 State Profile

90-DAY GOALS

10 practice interviews to confirm the problem and pricing

3 pilot practices signed to a Gap Assessment

1 automated AC-2 account review for one identity system

THE ASK

- Pilot practice introductions
- A technical cofounder
- Mentors, building on talks with Alfred Goldberg
- Sales and pitch coaching

FOUNDER

MS Cybersecurity Mgmt, Purdue Global (2026) · BS Computer Science (2023) · BFA, MICA · HIPAA BA certified · ISACA, ISC2
