TAMPA BAY WAVE · CYBERTECH|X 2027 · ENTREPRENEUR APPLICATION

Logical Coders

Structure You Can Prove.

Audit-ready compliance evidence for small healthcare and professional practices: NIST CSF 2.0, SP 800-53 and HIPAA, without a security team.

Anèl Henning, Founder Tampa, Florida logicalcoders.co

PROBLEM

Small Practices Are Asked for Proof They Can’t Produce

No Security Team

A 20-person dental or therapy office has no one whose job is compliance. The office manager inherits it.

Pressure From All Sides

Clients, cyber insurers and auditors each ask for evidence, in their own format.

Policies Without Proof

Frameworks describe outcomes. Screenshots and binders don’t show a control works.

WHY NOW

The Risk Is Large and the Practices Are Small

729

healthcare data breaches reported to HHS in 2024

185.8M

individuals affected in 2024, a record

99.1%

of Florida’s 54,204 health care employers are small businesses

Sources: HIPAA Journal, 2025 Healthcare Data Breach Report (OCR data); SBA Office of Advocacy, Florida 2025 State Profile

SOLUTION

Every Control Tied to a Risk, an Owner and Its Evidence

TODAY

GRC Toolkit

Twelve templates in five phases. Maps CSF 2.0 to SP 800-53 to HIPAA, with a risk register, control narratives and an evidence package.

NEXT

GRC Engine

Software that pulls evidence from client systems with their approval, tests each control once and reuses it across frameworks.

HOW IT WORKS

From Framework to Audit Evidence

INPUTS

Frameworks

NIST CSF 2.0
NIST SP 800-53
HIPAA
SOC 2
FedRAMP

→

PROCESS

Five Steps

Risk Assessment
Control Mapping
Gap Analysis
Documentation
Evidence Validation

→

OUTPUTS

Deliverables

Risk Registers
Control Narratives
Gap Assessments
Audit Evidence Packages
Governance Reports

PRODUCT

Four Modules in the MVP

Automated Evidence Pull

Read-only API access to Entra ID, Okta, AWS, GitHub and Jira. The client authorizes each request. No passwords collected.

Cross-Framework Mapping

One test and one evidence set reused across HIPAA, SOC 2, ISO 27001 and PCI DSS.

Continuous Monitoring

Flags exceptions, such as a terminated user still active, before the auditor finds them.

Sampling Calculator

Sets a defensible sample size from population, risk and confidence target.

No LLM in version 1: every result is rule-based and repeatable, so an auditor can re-perform it.

BUILT SO FAR

The Method Is Written, Tested and Public

- ✓ GRC white paper and MS capstone (Purdue Global, 2026)
- ✓ Twelve templates in five phases, with worked exhibits
- ✓ Two guides: Compliance Analyst and IT Auditor
- ✓ Eight sample artifacts, from risk register to AI governance
- ✓ AC-2 re-performed in Python and SQL: 7 exceptions found

STAGE

Pre-revenue

No paying clients yet. The next step is a pilot with real practices.

Exceptions found in fictional Sunshine Dental Group data. Portfolio: anelhenning2-collab.github.io/portfolio

MEASURING SUCCESS

What a Pilot Will Test

Per audit engagement	Manual baseline	Pilot target
Evidence requests	100	65
Manual screenshots	80	10
Auditor collection time	20 hours	7 hours
Client response cycles	5	2
Exceptions caught early	2	8

Hypothetical targets for a pilot, not achieved results.

MARKET

Starting With Tampa Bay Practices

First Customers

- Dental and orthodontic offices
- Therapy and counseling practices
- Small clinics with 5–50 staff
- Business associates that handle patient data

Path to Grow

Tampa Bay pilots and referrals

↓

Florida 54,204 small health care employers

↓

National audit firms that serve small clients

Source: SBA Office of Advocacy, Florida 2025 State Profile (health care and social assistance)

COMPETITION

Where the Options Fall Short

Option	Built for	Gap for a small practice
Vanta, Drata, Secureframe	Tech companies seeking SOC 2	Built around SaaS and cloud stacks
Consulting firms	Mid-size and large clients	Hourly fees; know-how leaves with them
Template packs	Anyone	No testing, no owners, no evidence
Logical Coders	**Small healthcare practices**	**Evidence-first, human-supervised, no LLM**

BUSINESS MODEL

Services First, Software Next

Offering	Price	Revenue type
Gap Assessment	Set in pilot	One-time
Compliance Retainer	Set in pilot	Recurring
GRC Engine for audit firms	Set in pilot	Subscription

Each assessment builds the evidence library the software automates.

Prices are hypotheses, to be set with pilot practices and CyberTech|X mentors.

FOUNDER

Anèl Henning

MS, Cybersecurity Management
Purdue Global, GPA 3.82, November 2026

BS, Computer Science
Rasmussen University, 2023

BFA, Graphic Design
Maryland Institute College of Art

HIPAA Business Associate certification
2026 · member, ISACA West Florida and ISC2 Tampa Bay

Roles to Fill

Technical cofounder
to build the GRC Engine

Audit advisor
CPA or CISA who has run engagements

NEXT 90 DAYS

Three Goals for the Program

10

Practice interviews

Confirm the problem and test pricing with Tampa Bay practices

3

Pilot practices

Signed to a Gap Assessment that measures the pilot targets

1

Working evidence pull

AC-2 account review automated for one identity system

THE ASK

Why CyberTech|X

Pilot Introductions

Warm introductions to Tampa Bay practices and the IT providers who serve them.

A Technical Cofounder

Access to engineers in the Tampa Bay Wave and USF network.

Cybersecurity Mentors

Building on conversations already held with program mentors.

Sales and Pitch Coaching

To set prices, close pilots and be ready for Pitch Night.

THANK YOU

Structure You Can Prove.

Helping Tampa Bay practices get reliable evidence faster, test controls once, and find problems before they become expensive.
